

Model View Presenter (MVP)

Model:

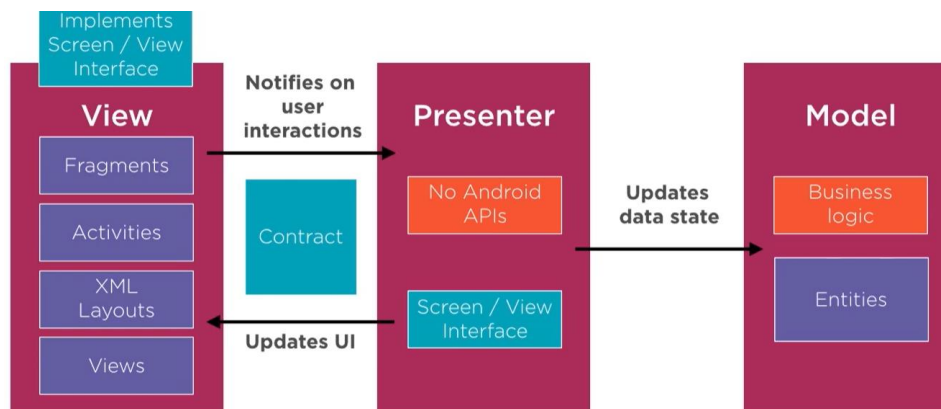

- Same as in MVC
 - Represents the data model
 - Manages data's states
 - Includes Business Logic of our application
 - Often used across different parts of our application

View:

- Our XML Layouts and views
- Our activities and fragments:
 - Implements an interface for Presenter's action

Presenter:

- Has no relation to our views (unlike MVC)
- Operations are invoked by our view (activities and fragments)
- Views updates are done via view's interface

The interface which has been implemented by our View and binded to our presenter, is often called the Contract
